

Armor API Guide

Overview

Armor offers a RESTful HTTP service called the Armor API. This API system allows you to fully access the Armor Management Portal (AMP) via JSON data formats, which allows you to programmatically manage elements of your AMP account.

This guide applies to both **Armor Complete** and **Armor Anywhere** users; however, you should review the beginning of each section to verify product compatibility.

Access the Armor API

To learn how to access the Armor API, see [Log into Armor API](#).

Access the interactive Armor API

The interactive Armor API tool, powered by Swagger, is a cloud-based tool used to build, deploy, and document APIs. You can use this tool to test, review, and implement API calls.

To learn more, see [The interactive Armor API](#).

Review Armor API calls

The Armor API is divided into six sections:

API section	Description	Product compatibility
Authentication	View API information for: <ul style="list-style-type: none">• Logging into the Armor API• Password recovery• API keys	<ul style="list-style-type: none">• Armor Complete• Armor Anywhere
Infrastructure	View API information for: <ul style="list-style-type: none">• Workloads• Virtual machines	<ul style="list-style-type: none">• Armor Complete
Network Services	View API information for: <ul style="list-style-type: none">• NATs / IP addresses• Firewall rules• SSL/VPN• L2L tunnels	<ul style="list-style-type: none">• Armor Complete
Security	View API information for: <ul style="list-style-type: none">• Patching• Log & Data Management• Malware Protection• Vulnerability scans• Dynamic Threat Blocking	<ul style="list-style-type: none">• Armor Complete• Armor Anywhere

Support	View API information for: <ul style="list-style-type: none">• Support tickets	<ul style="list-style-type: none">• Armor Complete• Armor Anywhere
Account Management	View API information for: <ul style="list-style-type: none">• Invoices• Payment methods• Roles and permissions• Notification settings• User management	<ul style="list-style-type: none">• Armor Complete• Armor Anywhere

Learn about Armor API basics

To learn about request methods and object-type definitions, see [Learn about Armor API](#).
