This topic only applies to **Armor Complete** users.

Security Dashboards (Home screen)

Use the security dashboards to review and troubleshoot data for your virtual machine

Health Overview Dashboard

- [Protection Dashboard \(Armor Complete\)](#)
 - [Improve your Protection score](#)
 - [Detection Dashboard \(Armor Complete\)](#)
 - [Response Dashboard \(Armor Complete\)](#)
 - [Manage your health scores \(Armor Complete\)](#)
-

Security screen

Learn how malware data affects the security status of your virtual machine

Malware Protection

- [View malware events](#)
- [View service health data for Malware Protection](#)
- [Understand service health data for Malware Protection](#)
- [View detailed Malware Protection data](#)
- [Troubleshoot Malware Protection data](#)
- [Export Malware Protection data](#)
- [Troubleshoot Malware Protection screen](#)
- [Review API calls](#)

Learn how FIM data affects the security status of your virtual machine

FIM

- [View FIM data](#)
- [Understand FIM data](#)
- [View detailed FIM data](#)
- [Export FIM data](#)
- [Troubleshoot FIM data](#)
- [Review API calls](#)

Learn how the patching status affects the security status of your virtual machine

Patching

- [View Patching Data](#)
- [Understand Patching data](#)
- [View Patching details](#)
- [Export Patching details](#)
- [Review API calls](#)

Review log statuses and event types and upgrade your log retention plan

Log and Data Management

- Overview
- View collected logs
- View logging status of a virtual machine
- Review log retention plans
- Upgrade log retention for existing virtual machines
- Upgrade log retention for new virtual machines
- View log collections projections
- Export log service status
- Troubleshoot Log Source section of the Log Management screen
- Review API calls

Review log types that are collected by default and upgrade plans

Default log collection

Collect host-based logs

Log Relay for host log collection

Convert your existing virtual machine into a log collecting device to collect logs from external Linux applications

Log Relay for log collection

Configure your vulnerability scanning options and schedule a scan for compliance

Vulnerability Scanning

- Overview
- Order Vulnerability Scanning
- Upgrade, downgrade, or delete a vulnerability scanning option
- Access Coalfire's Navis portal and schedule a scan

Research the reputation of specific IP addresses in order to allow or block

Dynamic Threat Blocking

- Overview
- Access the Dynamic Threat Blocking screen
- Add a rule
- Delete a rule
- Perform an IP Lookup
- Troubleshoot Dynamic Threat Blocking screen
- Review API calls

Create and manage your firewall rules

Firewall Rules

- Overview
- Create a firewall rule with a new IP address group
- Create a firewall rule with an existing IP address group and Service Group
- Edit a firewall rule
 - Edit name
 - Edit source
 - Edit destination
 - Edit action
 - Edit services
- Enable or disable a firewall rule
- Delete a firewall rule
- Export firewall data
- Create an IP group
 - Edit an IP Group
 - Delete an IP Group
- Create a service group
 - Edit a Service Group
 - Delete a Service Group
 - Review supported services and sub-protocols
- Review API calls

Review critical support tickets, known as Security Incidents

Security Incidents

- Overview
 - Access the Security Incidents screen
 - Troubleshoot the Security Incidents screen
 - Review API calls
-

Infrastructure screen

Create, configure, and maintain your virtual machine

Workload

- Create a workload with a new virtual machine
- Change the name of a workload
- Create a new tier in an existing workload
 - Option 1: Create a virtual machine to add to an existing tier
 - Option 2: Move an existing virtual machine to an existing tier
- Delete a workload
- Delete a tier
- Export workload data
- Troubleshoot Workloads screen
- Review API calls

Create, configure, and maintain your virtual machine

Virtual Machines

- Review available virtual machines
 - Create a virtual machine with a new workload
 - Create a virtual machine with an existing workload
 - Reboot, reset, suspend, or turn off a virtual machine
 - Delete Virtual Machine
 - Resize a virtual machine
 - Add disk space to an existing virtual machine
 - Move a virtual machine to a different workload
 - Rename a virtual machine
 - Review API calls
-
- Continuous Server Replication (Disaster Recovery)
 - Continuous Server Replication (Disaster Recovery) for upgraded users

Configure your snapshot and retention policy for recovery purposes

Advanced Backup

- Overview
- Access the Advanced Backup screen
- Add Advanced Backup for virtual machine restoration
- Restore a virtual machine from a virtual machine snapshot
- Restore a fileset from a virtual machine snapshot
- Add Advanced Backup for fileset restoration
- Restore a fileset from a fileset snapshot
- Edit an existing policy
- Replace an existing policy for a virtual machine
- Delete a policy
- Remove Advanced Backup from a virtual machine
- Troubleshoot Advanced Backup screen

Add or manage your IP addresses

IP Address

- Assign a new public IP address to an existing virtual machine
- Assign an existing public IP address to an existing virtual machine
- Unassign and remove an existing public IP address from a virtual machine
- Assign a secondary, available private IP address to an existing virtual machine
- Unassign a secondary private IP address
- Review API calls

Create and manage your L2L VPN tunnels

L2L VPN

- Create an L2L VPN tunnel with a new workload
- Edit an L2L VPN tunnel
- Enable, disable, or delete an L2L VPN tunnel
- Troubleshoot L2L VPN screen
- Review API calls

Enable SSL VPN access for you and for your users

SSL VPN

- Enable and install your SSL VPN access
 - Enable SSL VPN access for your user
 - Download and install your SSL VPN
 - Disable SSL VPN for your user
 - View user activity for SSL VPN
 - Troubleshoot SSL VPN screen
 - Review API calls
-
