

Create an API key

Overview

The **Create an API key** API creates an API key.

You can use the [Get Users](#) API to find the user ID.

Sample request

```
POST https://api.armor.com/users/6/keys
```

```
{
  "name": "John's API Key",
  "userId": 6
}
```

Input

The following table describes the different parts of this API call:

API Call / URL	Method / Type
/users/{id}/keys	POST

The following table describes the parameter (or parameters) for this API call:

Parameter	Description	Required or optional	Type	Example
user id	The ID of the user <div data-bbox="266 1213 829 1293"> You can use the Get Users API to find the ID of your users.</div>	Required	Integer	6
name	A descriptive name for the API key	Required	String	John's API key

Sample return

Status	Response
200	<pre>{ "id": "6", "apiKey": "00000000-0000-0000-0000-000000000000", "name": "John's API key" }</pre>
