Armor Partners

Your Armor partner team aims to provide you with information to bolster our partnership and enable you, your sales and technical teams with the information you need for onboarding, enablement and marketing.

- To learn how to troubleshoot the Malware Protection service, see [Troubleshoot Protection Scores](#).

Armor API

Armor offers a RESTful HTTP service called the Armor API.

This API system allows you to fully access the Armor Management Portal (AMP) via JSON data formats, which allows you to programmatically manage elements of your AMP account.
