

Get API keys

The **Get API keys** API retrieves the API key associated with a specified user.

You can use this information to find the ID of the API key. You can use the [Get Users](#) API to find the user ID.

Sample Request

```
GET https://api.armor.com/users/6/keys
```

Input

The following table describes the different parts of this API call:

API Call / URL	Method / Type
/users/{id}/keys	GET

The following table describes the parameter (or parameters) for this API call:

Parameter	Description	Required or Optional	Type	Example
id	The ID of the user <div data-bbox="266 989 829 1066"> You can use the Get Users API to find the ID of your users.</div>	Required	Integer	6

Sample Return

Status	Response
200	<pre>{ "id": "00000000-0000-0000-0000-000000000000", "name": "Example Key Name", "createdDate": "2018-08-15T00:00:00-05:00", "lastUsed": "2018-08-15T21:27:27.7336369Z", "keyStatus": "True" }</pre>
