

# Get Vulnerability Scan Scoring Details

This topic only applies to **Armor Anywhere** users.

The **Get Vulnerability Scan Scoring Details** API retrieves the severity scores associated with a specified report.

You can use the [Get Vulnerability Scans](#) API to find the **scanReportId** / **reportId**, which will return as **id**.

To learn about how the scores are calculated, see [ANYWHERE Vulnerability Scan Details](#).

## Sample Request

```
GET https://api.armor.com/vulnerability-scan/vm/222
```

## Input

The following table describes the different parts of this API call:

API Call / URL	Method / Type
<code>/vulnerability-scan/vm/{scanReportId}</code>	GET

The following table describes the parameter (or parameters) for this API call:

Parameter	Description	Format	Required or optional	Example
<b>scanReportId</b>	The ID for the specific scan report. <div style="border: 1px solid green; padding: 5px; margin-top: 5px;"> You can use the <a href="#">Get Vulnerability Scans</a> API to find the <b>scanReportId</b> / <b>reportId</b>, which will return as <b>id</b>.</div>	Integer	Required	222

## Sample Return

Status	Response
200	<pre>{   "hostName": "11-345-445-347",   "vmStatus": "Offline",   "critical": 0,   "high": 0,   "medium": 0,   "low": 0,   "info": 0,   "reportDate": "2017-10-20T18:05:50.4594808+00:00",   "severity": null }</pre>
