

Configure Marketplace Products (snippet)

Workloads and **tiers** are visual tools used in the Armor Management Portal (AMP) to help you organize your virtual machines and corresponding resources. Workload refers to a container of virtual machines that live inside the Armor data center. Tiers are levels within workloads.

1. In the Armor Management Portal (AMP), in the left-side navigation, click **Marketplace**.
2. Locate the desired add-on product, and then click **Configure**.
3. Click **Choose** for the desired add-on product option, and then click **Continue**.
4. In **Name**, enter a descriptive name to label the add-on product option.
5. In **Workload**, you can select an existing workload or a new workload.
 - If you select a new workload, then in **New Workload Name**, enter a descriptive name.
6. In **In Workload Tier**, you can select an existing tier or a new tier.
 - If you select a new tier, then in **New Tier Name**, enter a descriptive name.
7. In **Location**, select a data center location.
8. In **Password**, copy and store the password in a secure location. This password lets you access the virtual machine.
 - You can click **Generate** to have Armor create a new password.
 - You can also enter your own password. This password must follow the rules listed in the user interface.
9. Click **Continue**.
10. (Optional) For **Backup & Recovery Server**, to add additional storage, complete the missing fields, click **Add Disk**, and then click **Continue**.
11. Review the details for the order, and then click **Submit**.
12. (Optional) A ticket will be automatically created and sent to Armor Support. To see the status of this ticket, in the left-side navigation, click **Support**, and then click **Tickets**. Armor will use this ticket to communicate with you about the status of your order and to inquire about your specific configuration requests.
