

Troubleshoot Malware Protection screen (snippet)

If you do not have any malware events listed, consider that:

- Armor did not detect any malware events on this host in the last 90 days.
 - If a malware event is detected, Armor will contact you based on your notification preferences. To learn how to configure your notification preferences, see [Update notification preferences](#).
- You do not have permissions to view malware events.
 - You must have the **View AVAM** permission enabled to view malware vents. Contact your account administrator to enable this permission. To learn how to update your permissions, see [Roles and Permissions](#).
