

Create an endpoint (snippet)

1. In the Armor Management Portal (AMP), in the left-side navigation, click **Security**.
2. Click **Log & Data Management**.
3. Click **Endpoint**.
4. Click the plus (+) sign.
 - If you do not have any endpoints already created, then click **Add a New Log Endpoint**.
5. Complete the missing fields.
 - In **Private IP**, enter the public IP address that Armor will connect to.
 - In **Private IP**, enter the private IP address that Armor will connect to.
 - If you are not using a NAT, then enter the public IP address again.
 - In **Password** and **Confirm Password**, create and enter a password for your device.
6. Click **Save Log Endpoint**.
 - After you create an endpoint, there will be a **Pending** status assigned to the endpoint. After the endpoint has been provisioned, the status will change to **Online**. You cannot select a **Pending** endpoint.
