Topics Discussed

Log Depot for AWS CloudTrail Logs, Cloud Connections

Log Depot for AWS CloudTrail logs

UPDATE

This topic only applies to **Armor Anywhere** users.

In the **Armor Management Portal (AMP)**, you can use the existing Log Depot add-on product to collect CloudTrail logs from AWS.

After a successful configuration, the CloudTrail logs will appear in the **Log Management** screen in AMP.

At a high-level, to collect and view CloudTrail logs, you must:

- Order the Log Depot add-on product in the **Log Management** screen.
- Add an AWS account to Armor in the **Cloud Connections** screen.
- Create an S3 bucket and policy in the AWS console.
- Set up CloudTrail in the AWS console.

To learn how to collect CloudTrail logs, see [test 1](#).

Cloud Connections

NEW

In the Armor Management Portal (AMP), the newly created **Cloud Connections** screen allows you to sync your public cloud account with AMP.

After a successful sync, the instances for that public account will appear in the **Virtual Machines** screen in AMP. Similarly, the **Virtual Machines** screen has been updated to include new columns to support Amazon EC2 instances.

In this launch, the **Cloud Connections** screen only supports AWS accounts. To learn how to sync your AWS account with Cloud Connections, see [ANYWHERE Cloud Connections](#).
