

# Configure VM add-on products (snippet)

Follow these instructions to order:

- Virtual Machine
- Load Balancer
- Backup & Recovery Server
- Persistent Data Encryption Manager
- Advanced WAF

1. In the Armor Management Portal (AMP), in the left-side navigation, click **Infrastructure**.
2. Click **Virtual Machines** or **Workloads**.
3. Click **Create New**, and then select the desired add-on product.
4. Click **Choose** for the desired add-on product option, and then click **Continue**.
5. In **Name**, enter a descriptive name to label add-on product option.
6. In **Workload**, you can select an existing workload or a new workload.
  - If you select a new workload, then in **New Workload Name**, enter a descriptive name.
7. In **In Workload Tier**, you can select an existing tier or a new tier.
  - If you select a new tier, then in **New Tier Name**, enter a descriptive name.
8. In **Location**, select a data center location.
9. In **Password**, copy and store the password in a secure location. This password lets you access the virtual machine.
  - You can click **Generate** to have Armor create a new password.
  - You can also enter your own password. This password must follow the rules listed in the user interface.
10. Click **Continue**.
11. (Optional) For **Backup & Recovery Server**, to add additional storage, complete the missing fields, click **Add Disk**, and then click **Continue**.
12. Review the details for the order, and then click **Submit**.
13. (Optional) A ticket will be automatically created and sent to Armor Support. To see the status of this ticket, in the left-side navigation, click **Support**, and then click **Tickets + Notifications**. Armor will use this ticket to communicate with you about the status of your order and to inquire about your specific configuration requests.
