### Topics Discussed

Armor Anywhere Agent (Agent 2.5.1.0)

#### Bug Fixes

GENERAL

#### Armor Anywhere Agent (Agent 2.5.1.0)

The **Armor Anywhere** agent has been updated to correct various bugs:

- Panopta manifest file now includes the partner\_server\_id, preventing conflicts with the overhead Panopta service. This will occur for new registrations.
- Re-implemented chmod 755 permissions on the /opt/armor directory. This prevented the remote support service from running in Armor VPC environments. This will occur for new installations.
- Re-implemented /etc/use\_dsa\_with\_iptables file on new Agent installs. This file prevents the Trend IDS service from disabling linux IPTables services on installation. This will occur for new installations.
