

# Export virtual machine and workload data (snippet)

(For Workload) **Export Usage** creates a spreadsheet that displays the number of hours that each host reported into Armor for the previous month.

Function	Data Displayed
<b>CSV</b>	ID, Name, Location, Zone, Tier Count, VM Count, Total CPU, Total Memory, Total Storage, Tags
<b>Export Usage</b>	Account ID, Provider Name, Account Name, Transaction Date, Unit of Measure, Billed Units, Resource Name, SKU, Product Name, Location Name

1. In the Armor Management Portal (AMP), in the left-side navigation, click **Infrastructure**.
2. Click **Virtual Machines** or **Workloads**.
3. (Optional) Use the filter function to customize the data displayed.
4. In the bottom, right part of the screen, select the desired function, **CSV** or **Export Usage**.

- If you select **CSV**, then you have the option to export all data (**All**) or only the data that appears on the current screen (**Current Set**).
- **Export Usage** creates a spreadsheet that displays the number of hours that each host reported into Armor for the previous month.

Function	Data Displayed
<b>CSV</b>	Host Name, Provider, Location, External Address, Operating System, Security State, Security Count
<b>Export Usage</b>	Account ID, Provider Name, Account Name, Transaction Date, Unit of Measure, Billed Units, Resource Name, SKU, Product Name, Location Name
