Firewall, Virtual Machines, Help

Bug Fixes

GENERAL

Firewall

In the Armor Management Portal (AMP), on the **Firewall Rules** tab, there was an issue with the Armor default rule appearing in all search results. This issue has been resolved, and the default rule now only appears when you include a search term related to the default rule (e.g. ANY, Block, or Armor).

Additionally, on the **Firewall** screens, there was an issue with the vertical ellipses not displaying. This issue has been resolved, and the vertical ellipses now displays on each of the screens (tabs).

In the event that a firewall rule is in an **Error** or **Pending** state, the vertical ellipses will still display, however, it will be disabled.

Virtual Machines

In the Armor Management Portal (AMP), on the **Virtual Machines Overview** tab, there was an issue with the **Storage** field displaying the incorrect disk summary.

This issue has been resolved, and the correct total storage amount now displays in that field.

Help

In the Armor Management Portal (AMP), there was an issue with the **Help** icon pointing to a page that didn't exist. This issue has been resolved.
