Patching Details

NEW

In the Armor Management Portal (AMP), the **Patching Detail** screen was added. This screen displays the information about the latest updates applied to your virtual machine.

You can now select a specific virtual machine to view the corresponding Patch details.

The screenshot shows the 'OS PATCHING' interface in the Armor Management Portal. The page title is 'OS PATCHING' with a subtitle 'Showing statuses for all endpoints as of 04 Aug 2016 at 9:10 am'. A summary bar at the top right shows 4 Secured, 1 Warning, and 2 Critical updates. A filter bar allows filtering by 'All Statuses' and a search box for 'Name, OS, etc.'. Below is a table with columns: NAME, PROVIDER, OS, LAST PATCHED, PENDING UPDATES, SECURITY UPDATES, and REBOOT REQUIRED. One entry is visible: 'CentOS Extra Storage' from 'Armor' provider, running 'CentOS 6', last patched '2 hours ago', with 107 pending updates and 20 security updates. An 'Export As: CSV' link is at the bottom right. The left sidebar shows navigation options under SECURITY, INFRASTRUCTURE, SUPPORT, and ACCOUNT. The bottom left has 'UNPIN' and 'NEW' buttons.

NAME	PROVIDER	OS	LAST PATCHED	PENDING UPDATES	SECURITY UPDATES	REBOOT REQUIRED
CentOS Extra Storage	Armor	CentOS 6	2 hours ago	107	20	No
