## Armor Knowledge Base

[Armor Knowledge Base](#)

### Armor API Guide

Armor offers a RESTful HTTP service called the Armor API. This API system allows you to fully access the Armor Management Portal (AMP) via JSON data formats, which allows you to programmatically manage elements of your AMP account.

This guide applies to both **Armor Complete** and **Armor Anywhere** users.

### Learn about the Armor API Basics

---

To learn about the Armor API request methods and object-type definitions, see [Learn About Armor API](#).

### Authentication

---

To learn how to access the Armor API using the available authentication methods, see [Authentication](#).

### Access the Interactive Armor API

---

The interactive Armor API tool, powered by Swagger, is a cloud-based tool used to build, deploy, and document APIs. You can use this tool to review the API calls, as well as implement the calls.

Access the interactive Armor API tool at <https://developer.armor.com/>.
